

The Agile Project Management

Murat Özbilen, 12-13.11.2018.

Why this training ?

Over the past decades, many organizations of varied sizes and business domains have embraced and successfully implemented project management methodologies. However, Project Managers often face significant challenges when practicing "traditional" project management in environments where uncertainty and complexity are high and schedule and requirements flexibility is required. The Agile approach comes to address many of these challenges as it embraces change and provides both the principles and the tools which allow project teams to better deal with uncertainty, work in an iterative way, and provide frequent opportunities for changes or refinements of the project requirements and plan.

This training provides a "tool/domain independent" overview of Agile Project Management. It presents the basic agile concepts and principles, with references from agile methods such as SCRUM, DSDM, MSF, DAD, and teaches participant how to successfully adopt a more agile project management style. The hands-on part of the seminar is delivered through a series of short workshops on SCRUM, one of the most widely used agile methods.

Training program

- ⇒ Identifying the differences between Project types and methods that goes with agile
- ⇒ Changes in project management field
- ⇒ Born of Agile
- ⇒ Agile principles
- ⇒ Different agile techniques
- ⇒ SCRUM as an agile method
- ⇒ Role and responsibilities
- ⇒ Scrum process and rituals
- ⇒ Creating and fine tuning PBI
- ⇒ Sprint planning

Note: Attending this course you get 16 PMP PDUs.

Training objectives

Agile Project Management themes covered in this presentation include: embracing change; continuous learning and improvement; focusing on delivering value; iterative implementation with short increments and frequent deliverables; high level planning based on outline requirements; detailed planning created with the involvement of core project team members; scope management by prioritisation of requirements; a collaborative approach between all parties, including external suppliers; continuous stakeholder involvement; facilitative leadership and empowerment; sufficient but not excessive documentation and control;

Participants will:

- Understand the fundamentals of agile - the agile values and principles.
- Understand the benefits of a "disciplined" agile approach.
- Understand the agile roles, teams, and environments.
- Explore how to become more agile on projects.
- Understand the Estimation Process and challenges.
- Understand Scrum methods.
- Participate in a series of short Workshops.
